

Weekly Update 4

CSE299.1 Group - 3

Maharun Afroz, 2211023642, Sanjida Amin Nadia, 2122319642 Tasnia Hossain, 2121480642, and Tahmina Mozumdar, 2111482642

Progress Overview:

- 1. MongoDB Integration with FastAPI:**
 - Successfully connected MongoDB with FastAPI to store and retrieve data.
 - Configured MongoDB schema for chatbot sessions and chat conversations.
 - 2. Implemented Routes:**
 - Created a route to establish and maintain chatbot sessions.
 - Developed a route to handle file uploads and store them appropriately.
 - 3. MongoDB Schema Design:**
 - Defined and finalized the MongoDB schema to properly structure chatbot sessions and chat conversations for efficient data retrieval and storage.
-

Issues Faced:

- 1. Saving FAISS Vector Store in MongoDB:**
 - Encountered an issue when trying to save the FAISS vector store through FastAPI in the backend.
 - The problem specifically lies in the storage of the FAISS vectors in MongoDB, where the vectors aren't being saved correctly.
 - Potential causes include:
 - Incompatibility between the FAISS vector format and the MongoDB storage schema.
 - Problems with serializing the FAISS vectors into a format suitable for MongoDB.
 - Possible issues with handling the vectors during data insertion or retrieval.
-

Next Steps:

1. Investigate the serialization and deserialization process of the FAISS vectors for MongoDB storage.
2. Review and modify the backend logic for saving FAISS vectors, ensuring compatibility with MongoDB.
3. Test saving and retrieving FAISS vectors to verify proper storage and retrieval.
